Reasons for Allowance

The claimed invention of "a process of preparing a cationic nanoemulsion" is novel and non-obvious. The closest prior art (Douin US 2001/0028887) teaches oil-in-water nanoemulsions comprising oil globules with an average size of less than 150 nm and comprising at least one oil, at least one amphiphilic lipid, and at least one cationic polymer comprising at least one hydrophobic block and at least one hydrophilic block and processes comprising such oil-in-water. Douin does not teach the same order of addition of the reagents to obtain the nanoemulsion, the temperature at which the emulsion is cooled, nor does

Art Unit: 1617

Douin teach the pressures at which the emulsions are agitated (5×10^7 Pa versus Applicant's atmospheric pressure).

The novelty in Applicant's process is the order in which reagents are added, the pressure at which the emulsion is agitated and the temperature to which the nanoemulsion is cooled. By way of Declaration, Applicant has demonstrated that in fact the order of reagents is a critical factor in the emulsion that is obtained. As this is the closest prior art to the invention, the claimed invention is rendered neither anticipated nor obvious.
